

Incident Investigation Report

Alert Name

SSH Brute Force with Privilege Escalation

Severity

Critical

Data Source

secure.log

Summary

Multiple failed SSH login attempts were observed from 192.168.1.55. The attacker successfully authenticated using the admin account and later escalated privileges to root using sudo.

Timeline

09:15:01 - Failed login attempt (root)
09:15:05 - Failed login attempt (root)
09:16:10 - Successful login (admin)
09:16:30 - Root shell obtained via sudo

Indicators of Compromise (IOCs)

IP Address:

192.168.1.55

Username:

root
admin
guest
test

MITRE ATT&CK; Mapping

T1110 - Brute Force
T1078 - Valid Accounts
T1548 - Abuse Elevation Control Mechanism

Impact

Attacker obtained root-level access to the system.

Containment

- Isolate affected host
- Block source IP
- Reset compromised credentials
- Review persistence mechanisms

Lessons Learned

Successful authentication following multiple failed logins should be treated as a potential account compromise.
